

HUANJUN WANG

SENIOR SOFTWARE ENGINEER | BACKEND & PLATFORM ENGINEERING

Huanjun.wang@proton.me · Bellevue, WA

U.S. Permanent Resident (Green Card Holder) · No Sponsorship Required

SUMMARY

Senior Software Engineer with 10+ years of experience delivering enterprise products, backend services, APIs, and production platforms. Builds features from ambiguous customer and compliance requirements through system design, implementation, release, and post-ship telemetry. Combines hands-on C#/.NET backend depth with distributed data systems, reliability engineering, and independent development of AI application services and cloud infrastructure.

TECHNICAL SKILLS

Languages: C#, TypeScript, Go, C++, Python

Backend & APIs: .NET services, REST APIs, asynchronous workflows, background jobs, service integrations, authentication and authorization

Data & Infrastructure: Azure, GCP, Docker, Terraform, Kusto/Azure Data Explorer, Elasticsearch

Quality & Operations: Unit testing, Playwright E2E testing, GitHub Actions, production observability, fault recovery, RBAC, FedRAMP-regulated systems

PROFESSIONAL EXPERIENCE

Senior Software Engineer | Microsoft, eDiscovery

Redmond, WA · 2022 – Present

Backend & Product Engineering

- Delivered Microsoft Purview eDiscovery features from requirements and technical design through C# backend services, APIs, data workflows, validation, release, and post-ship telemetry.
- Partnered with product managers and legal, compliance, and data stakeholders to turn ambiguous enterprise requirements into scoped, production-ready solutions.

Platform, Security & Developer Productivity

- Contributed hands-on engineering across a 10,000+ VM Elasticsearch platform and approximately 100 PB of data and migration pipelines, implementing recovery, validation, observability, and operational safeguards.
- Implemented tenant-isolation and fine-grained RBAC capabilities for FedRAMP-regulated workloads handling highly sensitive legal and compliance data.

- Led build and CI modernization for a multi-language eDiscovery repository serving hundreds of engineers, coordinating platform adoption and mentoring two junior engineers through dependency mapping, compatibility remediation, and rollout validation.

Tech Lead / Software Engineer II | Microsoft, SharePoint Suzhou, China · 2017 – 2021

- Led a core engineering squad for the SharePoint 2019 architectural upgrade, setting technical direction, coordinating cross-team dependencies, and delivering the transition without customer-facing regressions.
- Mentored junior engineers on system design and established team-level code-review practices that improved engineering quality and production reliability.

Software Engineer | Microsoft, SharePoint Engineering Velocity Suzhou, China · 2015 – 2017

- Built dependency analysis, affected-target incremental builds, and deterministic output validation for migration of a tens-of-gigabytes SharePoint codebase from NMake to MSBuild.
- Reduced incremental build time by approximately 10x while preserving binary-equivalence checks and daily workflows for more than 2,000 downstream engineers.

SELECTED PROJECT

MyPawStories | Creator & Lead Engineer 2026 – Present

- Independently designed and implemented backend services for an AI storytelling product, including C#/.NET APIs, data modeling, asynchronous jobs, and production operations.
- Built AI story-generation workflows, Firebase authentication, and Stripe payment integrations from scratch.
- Deployed isolated QA and production environments using Terraform, Docker, and GCP managed services, with GitHub Actions, unit tests, and Playwright E2E coverage across core user, payment, sharing, and administrative workflows.

EDUCATION

South China University of Technology	Guangzhou, China
Master of Science in Computer Application Technology	2012 – 2015
Bachelor of Science in Computer Science	2008 – 2012
